

1. Title of the Innovation.

EduFlow Workspace: An AI-Powered Academic Collaboration and Integrity Platform.

2. Brief Explanation of the Idea.

EduFlow Workspace is a smart university learning platform designed to improve communication, assignment management, and academic integrity between students and lecturers. The system provides a centralized dashboard where students can access their registered units, receive learning materials, submit assignments, and receive notifications about new academic updates.

Unlike traditional learning systems that rely on email communication and manual assignment verification, EduFlow Workspace integrates real-time messaging and artificial intelligence tools to improve efficiency and transparency. Lecturers can upload course notes, assignments, and assessments, while students can submit their coursework through the platform.

The system automatically analyzes submitted assignments using AI-powered tools to detect AI-generated content, plagiarism, and similarity with other submissions. This helps lecturers maintain academic honesty while saving time during grading and review processes. Additionally, the platform includes a real-time chat system that allows students and lecturers to communicate instantly, making academic support more accessible.

Overall, EduFlow Workspace aims to modernize digital learning environments by combining communication, coursework management, and automated academic integrity checks into one unified platform.

3. Steps or Process Showing How the System Works

The system operates through a structured workflow that connects students, lecturers, and the academic management system.

Step 1: User Authentication

Students and lecturers log into the system using their university credentials. The platform verifies their identity and assigns them access based on their role.

Step 2: Dashboard Access

After logging in, users are redirected to their dashboard. Students can view their registered units, upcoming assignments, notifications, and academic updates. Lecturers can manage their courses, upload materials, and communicate with students.

Step 3: Course Material Distribution

Lecturers upload lecture notes, assignments, and course materials to the platform. These resources become immediately available to students enrolled in the respective unit.

Step 4: Assignment Submission

Students upload their assignments through the system. The platform accepts document formats such as PDF and Word documents.

Step 5: Automated Assignment Analysis

Once an assignment is submitted, the system automatically performs several checks:

- Text is extracted from the uploaded document.
- AI detection tools analyze whether the content was generated by artificial intelligence.
- Plagiarism detection compares the document with other submissions to detect similarities.

The results are stored and presented to the lecturer for review.

Step 6: Communication Through Chat

Students and lecturers can communicate using a real-time chat system. This feature allows students to ask questions about assignments, lectures, or course materials and receive immediate responses from lecturers.

Step 7: Notifications and Updates

Students receive notifications when:

- New assignments are posted
- Lecture notes are uploaded
- Deadlines are approaching
- Lecturers send important announcements

4. Pictures of the Demonstration.

1. Login Page

← Back to Home

Student Portal

Sign in to access your courses and resources

2. Student Dashboard

Displays registered units, notifications, and available course materials.

3. Lecture Dashboard

4. Assignment Submission Page

Shows how students upload their assignments to the platform.

5. Assignment Analysis Results

Displays the plagiarism score and AI detection results generated by

the system.
Upon clicking the View button:

6. Real-Time Chat Interface

Demonstrates how students and lecturers communicate within the platform.

Both are able to send and receive texts, images and documents.
